

Finance App Upgrade

Stock Management to Accounting System

WernerTech Solutions

Version 1.0 | January 2026

Executive Summary

Project: Upgrade Stock Management System to Full Finance/Accounting Application

Objective: Transform existing inventory management system into comprehensive financial management platform with double-entry bookkeeping, financial reporting, and automated accounting workflows.

Timeline: 8-12 weeks for complete implementation

Key Deliverables: Chart of Accounts, Journal Entries, Payment Tracking, Financial Reports, Expense Management, Automated Accounting Integration

1. Current System Analysis

1.1 Existing Collections

Collection	Purpose	Action Required
Product	Product catalog	MODIFY - Add cost field for COGS
ItemCheckout	Equipment checkout	KEEP - No changes needed
Invoice	Customer invoices	MODIFY - Add accounting links
StockMovement	Inventory audit trail	MODIFY - Link to journal entries

2. Critical Collections to Add

Collection	Purpose	Priority
Account	Chart of Accounts - Master list of all accounts	CRITICAL
JournalEntry	Double-entry bookkeeping engine	CRITICAL
Payment	Track all money in/out transactions	CRITICAL
Expense	Record and track business expenses	HIGH
Bill	Track supplier bills (Accounts Payable)	HIGH
TaxTransaction	VAT/WHT tracking	MEDIUM
FiscalPeriod	Period management and closing	MEDIUM

2.1 Account Collection (Chart of Accounts)

Purpose: Master list of all financial accounts with hierarchical structure

Field	Type	Description
accountCode	String	Unique code (e.g., '1110', '4100')
accountName	String	Account name (e.g., 'Cash in Hand')
accountType	Enum	asset, liability, equity, revenue, expense
parentAccount	ObjectId	Parent for hierarchical structure
ancestors	[ObjectId]	All parent IDs for fast queries
canPost	Boolean	Can transactions be posted here?
systemAccount	String	System identifier for automation
cachedBalance	Number	Performance optimization

Critical Indexes: accountCode, accountType, ancestors, path, systemAccount

2.2 JournalEntry Collection (Bookkeeping Engine)

Purpose: Records ALL financial transactions using double-entry bookkeeping

Field	Type	Description
entryNumber	String	Unique entry number
entryDate	Date	Transaction date
entryType	Enum	sale, payment, expense, adjustment
lines[]	Array	Journal lines (min 2 required)
lines.accountId	ObjectId	Account reference
lines.debit	Number	Debit amount
lines.credit	Number	Credit amount
status	Enum	draft, posted, reversed

Critical Rule: Total debits MUST equal total credits (validated on save)

Immutability: Journal entries cannot be modified once posted (audit trail)

3. Critical Features to Implement

Feature	Priority	Effort	Description
Automated Journal Entries	CRITICAL	High	Auto-create entries from invoices, payments, expenses
Payment Recording	CRITICAL	Medium	Record and track all payments
Financial Reports	CRITICAL	High	P&L, Balance Sheet, Cash Flow
Expense Management	HIGH	Medium	Track and approve expenses
Bank Reconciliation	HIGH	Medium	Match bank transactions
Multi-Currency	MEDIUM	Medium	Support multiple currencies

4. Implementation Roadmap

Phase	Duration	Key Tasks
Week 1-2 Foundation	2 weeks	• Create schemas • Seed Chart of Accounts • Build account UI • Journal entry logic
Week 3-4 Core Features	2 weeks	• Invoice automation • Payment recording • Expense management • Basic reports
Week 5-6 Advanced	2 weeks	• Bank reconciliation • Aged reports • Tax tracking • Advanced features
Week 7-8 Finalization	2 weeks	• Testing • UI polish • Training • Documentation

5. Key Integration Flows

5.1 Invoice → Accounting Integration

1. User creates invoice with line items
2. System validates data and reduces inventory
3. System creates journal entry automatically:
 - Debit: Accounts Receivable (+)
 - Credit: Sales Revenue (+)
 - Credit: VAT Payable (+)
 - Debit: Cost of Goods Sold (+)
 - Credit: Inventory (-)
4. Account balances update
5. Invoice links to journal entry

5.2 Payment → Accounting Integration

1. User records payment (M-Pesa/Bank/Cash)
2. System creates payment record
3. System creates journal entry:
 - Debit: Cash/Bank/M-Pesa (+)
 - Credit: Accounts Receivable (-)
4. Payment allocated to invoice(s)
5. Invoice status updates (partial/paid)
6. Account balances update

6. Financial Reports

Report	Description	Key Users
Profit & Loss	Revenue vs Expenses for period	Management, Finance
Balance Sheet	Assets = Liabilities + Equity	Management, Investors
Cash Flow	Cash movements (operating, investing, financing)	Finance, Management
Aged Receivables	Outstanding customer invoices by age bucket	Sales, Finance
Aged Payables	Outstanding supplier bills by age	Finance, Procurement
Trial Balance	All account balances (debits = credits)	Accountant
General Ledger	All transactions by account	Accountant, Auditors
Account Ledger	Transaction history for one account	Accountant

7. Migration Strategy

7.1 Phase 1: Setup (Week 1)

- Create new collections and schemas
- Seed Chart of Accounts with standard accounts
- Add database indexes
- Modify existing schemas

7.2 Phase 2: Historical Data (Week 2)

- Create opening balance journal entries
- Post existing unpaid invoices to AR
- Calculate and record inventory value

7.3 Phase 3: Enable Automation (Week 3-4)

- Enable automatic journal entries for new transactions
- Test all workflows thoroughly
- Train users on new system

8. Critical Success Factors

Factor	Importance	Action
Data Accuracy	CRITICAL	Thorough validation and testing
Audit Trail	CRITICAL	Immutable journal entries
User Training	HIGH	Comprehensive training program
Performance	HIGH	Proper indexing and caching
Backup	CRITICAL	Daily backups during migration

9. Resources Required

Role	Commitment	Duration	Responsibilities
Backend Developer	Full-time	8-12 weeks	Schema design, API development, accounting logic
Frontend Developer	Full-time	8-12 weeks	UI/UX, dashboards, reports
QA Tester	Part-time	4-6 weeks	Testing, validation, bug fixes
Accountant	Part-time	2-4 weeks	Validation, training, consulting

10. Conclusion

This upgrade transforms the stock management system into a professional accounting application that provides:

- ✓ Full double-entry bookkeeping
- ✓ Automated journal entries
- ✓ Comprehensive financial reporting
- ✓ Payment tracking and reconciliation
- ✓ Expense management
- ✓ Accounts receivable/payable tracking
- ✓ Audit-ready records
- ✓ Real-time financial visibility

Next Steps:

1. Review and approve this document
2. Allocate development resources
3. Set up development environment
4. Begin Phase 1 implementation
5. Create detailed project timeline

WernerTech Solutions is ready to deliver a world-class financial management system that will streamline operations and provide unprecedented visibility into business finances.
